## PROFESSIONAL EXPERIENCE

---

### LIBERTY MUTUAL INVESTMENTS, Boston, MA

2014 – Present

#### *Principal Systems Analyst*

Gather requirements and drive the team toward delivering product through using Agile methodology, while meeting targets and preserving client value and quality by heading project meetings. Administer the product backlog, devise an effective vision, and deliver timely stakeholder feedback on development iterations. Facilitate end users to transfer out 1400+ holdings from LMI accounting system. Determine acceptance criteria and devise test scenarios/plans and perform user acceptance test (UAT) by collaborating with users.

- Successfully transferred 5000+ holdings from Ironshore to LMI accounting system to complete the acquisition.
- Enhanced overall system performance through utilizing job scheduler (Active Batch) to schedule jobs and automated workflow.
- Executed the application and amplify overall system performance by working with cross-functional teams, end users, and vendors.
- Improved and headed investment operations, controls, data flow, and reporting by business analysis/product management for systems.
- Evaluated the business processes for inefficiencies and suggested recommendations for solutions or improvements by assisting new product development leader.
- Accelerated internal procedural operations by working on different financial products such as Common Stock, Bonds, MBS Securities, Fixed Income, and TBAs etc., while understanding workflows, processes, and data across environments, and contribution.
- Articulated data analysis and identify root cause by sustaining production environment, troubleshooting problem, and working on complex MS SQL queries.

### OMGEO, LLC, Boston, MA

2011 – 2014

#### *Business Analyst*

Delivered product, while attaining targets and objectives of the project and keeping client's value and quality – e.g., delivering minimal viable product by participating in client meetings to gather requirements and driving the team towards the fastest way. Spearheaded and participated in the agile iteration planning meeting, showcase, and other agile ceremonies. Collaborated and liaised between business users and different teams involved in the post-trade settlement and central matching application development. Worked on post-trade settlement and matching solution for financial products such as Equity, Fixed Income, and REPOs.

- Built the technical developments throughout a series of rapid iterations by implementing an iterative agile methodology and work with the customers and the developers.
- Assessed business requirements and formulated concise and effective user stories.
- Refined product backlog items and updated key performance indicators (KPIs) based on value after delivery of each increment to end users by assisting end users and the development team.

## **THOMSON REUTERS, Milwaukee, WI**

2009 – 2011

### *Business Analyst*

Established UML diagrams using MS Visio, and formalized user guides and client presentations for the deployment of new functionality by preparing functional specification/business requirement documents. Derived the business specification document and facilitated in preparation of system requirement specifications by serving as a business analyst and analyzing business requirements. Planned and executed business strategy by participated in and facilitated different levels of discussions through JAD sessions and business workshops held.

- Designed internal SharePoint site and migrated documents from the shared drive to SharePoint environment.
- Ensured accuracy and meet deadlines by coordinating and prioritizing outstanding defects and enhancement/system requests based on business requirements and allowing sufficient time frame.

## **STATE STREET CORPORATION, Boston, MA**

2006 – 2009

### *Business Systems Analyst*

Spearheaded various projects including leading client facilitation meetings to gather requirements and work on business requirements by analyzing/designing architecture by using Rational Unified Process (RUP) Methodology. Worked on various applications such a Global Transaction Manager, Global Reference System and Instruct Trade Order manager systems.

- Prepared vision documents, usecase documents, functional specifications, user interface specifications, and UML diagrams by using MS Visio and Rational Rose tools.
